CMP destination, source

1st case: positive number
CMP 08H, 05H
08H - 05H
ZF=0, SF=0, CF=0

2nd case: negative number
CMP 05H, 08H
ZF=0, SF=1, CF=1

3rd case: equal
CMP 05H, 08H
ZF=1, SF=0, CF=0

JUMP:
i. Unconditional jumping -> JMP
ii. Conditional jumping -> Depends on the condition of Flag Register after CMP
Jump Greater (JG)*
Jump Lower (JL)*
Jump Equal (JE)*
Jump Greater Equal (JGE)*
Jump Lower Equal (JLE)*
JZ (Jump Zero Flag)
JC (Jump Carry Flag)
JNZ (Jump Not Zero)

*** are in the syllabus**

newLine DB 13, 10, "Even Numbers", "$" this automatically does the carriage return and line feed

Loop:

i. **Explicit**
ii. **Implicit:** Loop Counter/Iterator -> CX

sum dw ? -> declare variable
